35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-10 are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. Supreme Court precedent (see *Diamond v. Diehr*, 450 U.S. 175, 184 (1981); *Parker v. Flook*, 437 U.S. 584, 588 n.9 (1978); *Gottschalk v. Benson*, 409 U.S. 63, 70 (1972); *Cochrane v. Deener*, 94 U.S. 780, 787-88 (1876)) and recent Federal Circuit decisions (see *In re Bilski*, 88 USPQ2d 1385 (Fed. Cir. 2008)) indicate that a statutory "process" under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. While the instant claim(s) recite a series of steps or acts to be performed, the claim(s) neither transform underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process. In claim 1, although the method is claimed as "computer implemented", however, the method is not explicitly performed or tied to a statutory apparatus. Furthermore, the claimed steps of displaying, manipulating and re-orienting can be manually or mentally performed without using a statutory apparatus. Thus the claims are rejected as non-statutory under 35 USC 101.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-30 are rejected under 35 U.S.C. 102(e) as being anticipated by
SCHRAG et al. (2005/0028111).

As per claim 1, Schrag teaches the claimed "computer implemented method for controlling a three-dimensional scene view", comprising:

- (a) "displaying a three-dimensional (3D) scene having one or more three-dimensional objects" (Schrag, [0025]; figure 3);
- (b) "displaying a 3D representation of a coordinate system of the scene, wherein the 3D representation:(i) comprises a current viewpoint; and(ii) comprises one or more faces, one or more edges, and one or more corners with each face, edge, and corner representing a corresponding viewpoint of the scene" (Schrag, figure 15; [0037]);
- (c) "manipulating the 3D representation;(d) displaying a new current viewpoint of the 3D representation based on the manipulation" (Schrag, [0033]); and
- (d) "reorienting the scene corresponding to the new current viewpoint based on the manipulation of the 3D representation" (Schrag, [0033]).

Claim 2 adds into claim 1 "the 3D representation comprises a cube" (Schrag, figures 2 and 11).

Claim 3 adds into claim 1 “wherein the 3D representation represents at least twenty-six (26) viewpoints of the scene” (Schrag, the number of bookmarks 182, 184, 186 or 224, 226, 228 is arbitrary; see also [0035], [0037]).

Claim 4 adds into claim 1 “wherein the manipulating the 3D representation, displaying the new current viewpoint, and reorienting the scene comprises: selecting one of the faces, edges, or corners of the 3D representation; the new current viewpoint comprises the selected face, edge, or corner of the 3D representation; automatically snapping and reorienting the new current viewpoint of the 3D representation to the selected face, edge, or corner; and automatically reorienting the scene to the corresponding new current viewpoint of the 3D representation” (Schrag, [0037]).

Claim 5 adds into claim 1 “wherein manipulating the 3D representation comprises:(a) rotating the 3D representation by dragging the 3D representation;(b) when the new current viewpoint of the 3D representation is within a threshold of a face, edge, or corner of the 3D representation:(i) automatically snapping and reorienting the new current viewpoint of the 3D representation to the face, edge, or corner; and(ii) automatically reorienting the 3D scene to the corresponding new current viewpoint of the 3D representation” (Schrag, [0033]).

Claim 6 adds into claim 1 “(a) displaying one or more indicators pointing to orthogonal faces of the 3D representation; and(b) wherein manipulating the 3D

representation comprises:(i) selecting one of the indicators; and(ii) the new current viewpoint of the 3D representation is set to the orthogonal face based on the selected indicator” (Schrag, [0033], [0037]).

Claim 7 adds into claim 1 “the 3D representation comprises different text labels on each of the one or more faces” (Schrag, the labels such as left, front, X, Y, Z; figures 7, 9; [0028]).

Claim 8 adds into claim 1 “the 3D representation comprises a 3D proxy model of a house” (Schrag, the house 200 is the box; figure17).

Claim 9 adds into claim 1 “highlighting the current viewpoint of the 3D representation” (Schrag, [0036]; figure 7).

Claim 10 adds into claim 1 “the current viewpoint of the scene is based on an object specific setting” (Schrag, figures 15, 17; [0035]-[0037]).

Claims 11-20 claim an apparatus based on the method of claims 1-10; therefore, they are rejected under the same reason.

Claims 21-30 claim an article of manufacture based on the method of claims 1-10; therefore, they are rejected under the same reason.
